Project Brand Kit & Identity Guidelines

Brand Identity is very important in a world where too many brands blend. The brand identity is meant to be used to stand out. However, we also want to keep the project accessible, which is why the project will follow the United States Section 508 guidelines for accessibility.

Color Palette

For our color palette, we want to start with a high contrast between black and white like tones. These colors will be used as the light and dark mode of the project.

For white, the hex code will be #e6ebf5 which is rgb 230, 235, 245.

For black, the hex code will be #282828 which is rgb 40, 40, 40.

To best visualize the contrast, the next pictures will show the two colors contrasting on a blue background for them to stand out.

Light Mode:

Dark Mode:

For Accent colors, the project will use red, blue, and green.

For red, the project will use hex code #d10a18 which is rgb 209, 10, 24.

For blue, the project will use hex code #1654b8 which is rgb 22, 84, 184.

For green, the project will use hex code #218219 which is rgb 33, 130, 25.

Typography Standards

The typography standards will start by being based on a few specific lines of the Section 508 website. To start, we want to follow the ADA and ABA acts that are stated on one of the section 508 websites.

“Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA)

The ADA and ABA accessibility standards require sans-serif fonts in a few places.

- 703.2.3 Style [Signage]: Characters should be sans-serif, not italic, oblique, script, highly decorative, or unusually shaped.
- 707.7.2 Characters [on certain display screens]: Characters on the screen must be in a sans-serif font, at least 3/16 inch (4.8 mm) high based on the uppercase letter “I” and contrast with the background.” (General).

This gives us a very easy set of directions to follow to start. Another part of the code gives us even more directions to follow.

“Section 508 Standards

- 402.4 Characters on Display Screens [for ICT with closed functionality]: At least one mode of characters displayed on the screen shall be in a sans serif font. Where ICT does

not provide a screen enlargement feature, characters shall be 3/16 inch (4.8 mm) high minimum based on the uppercase letter “I”. Characters shall contrast with their background with either light characters on a dark background or dark characters on a light background.” (General).

For a better idea of font size, it can be found in another quote from this page.

“Why 3/16 inch?”

Accessibility regulations specify a measurement of 3/16-inch-high minimum based on the uppercase letter “I,” which is not a metric traditionally associated with typography. This is because the regulation must work “in the field” for third-party testing. For most typefaces, this works out to 16 pt.” (General).

Based on these quotes, to follow Section 508, the project will be using Times New Roman in font size 16 as a baseline. For more accessibility, users will be able to increase or decrease the font size to their liking. For our documentation, we will still use Times New Roman with a font size 12.

Brand Identity Standards

For Brand Identity, the project will always have the user as the most important part of the project. The project will strive to be open on topics that affect the user and their experience with the project itself.

Project Logo Assets

The project's logo is still in development. This document will be updated once the logo is completed.
