Contribution Guide

Workflow standards are very important to keep the group as a complete team.

Documentation

Documentation will be following the APA format. On the cover page, you will see the name of the file in bold, each team member's name, and the start date of the document. The header on each page will have the page number in the top right corner of the page and the name of the document, same as the name of the document on the cover page, in the top left corner of the page. To start the document, the name of the document will be center aligned in bold. The whole document will be written in Times New Roman in 12-point font size. The documents will also be double-spaced. If the document has different sections to it, the section names will be left aligned and bolded. If references are used, a reference page will be at the end of the document. The references will be formatted properly in alignment with the APA style. The page(s) for the references will be separated from the actual document with a page break and will start with a center aligned "References" which will be bolded, formatted like the file name at the beginning of the file.

Branch Naming Conventions

Branch names will be simple and explanatory. Main will be where most of our files will be held, however, should branches need to be made, they will be made with a very consistent and defined intent, with that intent being stated in some form of documentation in the branch.

Pull Request Procedures

When pull requests are made, the team will discuss as a team the request made. Everyone will give their input on the pull request and will try to come to a common consensus on the request. If the request cannot be decided on by the team, the team lead Travis Scott will decide, with the knowledge of the team discussion, whether the pull request will be allowed or denied.

Code Review Requirements

Code Review will be handled as a team. While the team will not always be able to handle every code review at the same time, each team member should review the code and give comments on how to properly improve the code itself. Each team member should have a focus on their part of the project they are the lead on while also giving input on other parts of the code as they see fit.

Commit Message Formats

Commit Messages should have a short easy description as the main part of the message (such as “pdf upload”) while a more thoughtful extended should be used as seen fit, including the version number, if it is the final version of the file, if it is subject to change, and a further explanation of the files reason it was uploaded.
