AI Usage Policy

As a team, we recognize that AI is a constantly evolving sector of the Computer Science workflow. With this constant evolution, AI continues to grow in its role in every part of the workflow, making it harder to keep up with the field without using AI in some form. While we understand this to be true, we also understand the frustration of companies hiding their usage of AI to their customers and users. With those understandings, our team believes a very important part to development is being open and honest about its AI usage.

To follow that, we will build a log of AI usages throughout the development process of the project. That log will follow a strict format that we have decided to be the most thorough and understandable format to our users. It will have every time AI is used in this process with the date, time, and chat of the process. That log can be found under the “AI_LOG.md” file found in the GitHub repository for the team.
